Walleye Fund \$19,780.58
Land Fund \$15,601.15
Shoreland Fund \$23,789.16
Unrestricted Fund \$24,148.10
Total \$83,318.99

Memberships
244 members
19 associate members
263 total

For reference
249 total in 2022
233 total in 2021

After August election, filings will be made with IRS and WI Dept of Financial Institutions for fiscal year ending, June 30, 2023.

Speaker: Jeff Scheirer- WI DNR Fish Biologist: Focused on walleye restocking. Several strategies proposed to increase population. No one cause seems to be the issue. Seems to be change in environmental conditions that make other species of fish more prevalent as walleyes are not as adapted to changing conditions and other species have become more adapted and more dominant. The state has a walleye initiative for stocking walleye fingerlings. Island Chain has been stocked since 2010. Each of the four lakes receives a prescribed rate of 10 large fingerlings (6-8 inches long) per acre every other year. In spring of 2023 two surveys were conducted. Two Lake Association members participated: Rod Steege and Jeff Pippinger. Not enough for data on Clear and McCann. 2.4 adults per acre on Chain Lake. 1.8 adults per acre in Island Lake. Population is up three times since 2012 in Island and Chain. Not seeing natural reproduction which was the goal of stocking. Appears that in order to keep a walleye fishery here DNR will have to continue stocking. There is funding for three more years for DNR stocking. Also were able to get good information on Northern Pike. Size structure looks good and is unusual. DNR will draft a summary report online this winter after their field season. Also have data on bluegills and large-mouth bass. DNR will return in fall for one more walleye recruitment surveys. The chain is also enrolled in another study that looks at the interaction between bass and walleyes.
